STAT

LOGNOTE -- Chief, Field Coverage Staff, 15 January 1982

[] DCI QUERY ON SATELLITE MONITORING

STAT

Received a call today from [], Office of Commun-
cations, seeking information to respond to an inquiry from Mr. STAT
Casey. The request was relayed through the DDA. [] said STAT
Casey had been at a meeting where the subject of a satellite
receive-only-station for Headquarters had been mentioned. Casey
was especially interested in knowing if Polish television was
relayed via satellite and if so whether it could be monitored
here.

STAT

As for whether such television transmissions could be moni-
tored from the Washington D.C. area, I told [] this was a STAT
technical question more appropriately directed to our engineers,
but it was my understanding that with the appropriate monitoring
equipment the Soviet 14W satellite could be monitored from the
eastern United States. The 14W satellite is the one which has
been observed carrying some East European TV.
